

Data File Translators

Converting Foreign Data File Formats

WinDaq Waveform Browser contains a file conversion utility that allows you to convert other data files to the format used by the WinDaq Waveform Browser. This enables data files from other sources such as ASYSTANT, DADiSP, IOtech, or any spreadsheet program to be viewed and/or otherwise analyzed in the WinDaq Waveform Browser. The input format options are listed on the right side of the Open dialog box:

Export Formats

WinDaq Waveform Browser also allows you to select a range of waveform information from an existing data file (or specify the entire file) and export it into a new data file in a variety of different storage formats. The output or export format options are listed on the right side of the following dialog box:
